## Suspended walkway to connect VA buildings

WRIGHT-PATTERSON AIR FORCE BASE, Ohio — On June 4, 2002, the Air Force Research Laboratory's, Air Vehicles Directorate (VA) reached a significant milestone in efforts to connect buildings 45 and 145. The installation of the 12-ton, 8x70ft metal framework base for the eventual suspended walkway between the two buildings brings the \$718K project one step closer to its anticipated Labor Day completion.

The project, nicknamed the "Bill Borger Bridge" after the former Deputy Director of Air Vehicles and overseen by Vince Miller, VA, Project Manager, was given the notice to proceed in November 2001, and the project commenced with groundbreaking in December 2001, but has been plagued by bad weather, delaying completion. @
